

Password Recovery

Facephi's Multifactor Authentication Solution offers an efficient and secure alternative to overcome challenges associated with password recover and related operational costs.

Check out the Facephi Benefits

Reducing Password Recovery Costs

It eliminates expenses linked to mass OTP delivery via SMS, resulting in substantial savings.

Multibiometric Solution

Facial recognition, voice, and fingerprint to ensure a robust and multifactor authentication.

Facial

Voice

Fingerprint

Behavioral Biometrics

Silent background monitoring of a user's behaviour, adding an additional layer of security within a seamless experience, ensuring robust authentication.

Features

Passive Liveness: Real-time Anti-Fraud Security

To ensure real-time authentication, preventing fraudulent attempts.

Maximum Integrability and Interoperability with Existing Systems

Easily integrates with existing systems, allowing for a seamless transition.

Capture Time Under 0.34s: Seamless Experience

It provides a fast and efficient user experience with an ultra-fast capture time, enhancing operational efficiency.

Users

Step 01

Onboarding (optional)

- Step 01 Document capture
- Step 02 Automatic Selfie
- Step 03 Verification

Step 02

Authentication

Biometric capture with passive liveness.

Step 03

Comparison selfie against onboarding selfie (1:1) or against database (1:N).

Facephi advantages

- iBeta Level 1 and 2 Certification
- Validation in real time
- 1:1 and 1:N authentication
- Dynamic, encrypted and tokenised AES 256
- Identification time for 30 million faces is less than 1 second (1:N)
- 99.999% success rate
- Connection to government databases
- Validation in real time
- Encrypted and tokenised pattern with smart learning
- Multi-device compatibility
- Any language or accent supported
